# Cyberabad MTO Adopts Tech-Driven Systems for Transparency and Efficiency

The Cyberabad Motor Transport Office (MTO) has introduced several new measures to improve transparency, accountability, and management. All requisitions and vehicle records are now being maintained through the MTO software system, with logbooks arranged rack-wise, column-wise, and book number-wise for systematic record-keeping.

CAR Headquarters ADCP Shameer, MTO-I S. Prashanth Babu and MTO-II N. Veeralingam have successfully implemented these technology-driven initiatives at the Cyberabad MTO.

Servicing dates, vehicle repair details, job card status, and closing information will now be sent directly to the concerned user officer through Whatsapp. Additionally, details of the additional fuel quota will also be communicated in a timely manner. To further streamline operations and enhance efficiency, a tailor-made software system has been developed specifically for the Motor Transport Office.

A Quick Service Bay has been constructed with the purpose of servicing vehicles within an hour, ensuring faster turnaround and improved efficiency.

A new system has also been implemented to easily manage and keep track of vehicle-related articles. Bar-coding is being introduced to track each item accurately, ensuring proper issue-return monitoring. The merging of inventory data with MTO records further enhances transparency and eliminates duplication.

In its workshops, the MTO has adopted a use-and-recycling model. Old and unused materials are being identified and creatively repurposed, with some converted into eco-friendly items such as bird feeders, peacock feeders, and other useful materials that support biodiversity. This not only reduces waste but also promotes optimum utilization of available resources.

These initiatives highlight the commitment of Cyberabad Police towards sustainability and innovation. By combining technology with eco-friendly practices, the MTO ensures effective monitoring of resources while setting an example in accountability and responsible resource management.

The Cyberabad MTO is serving as a role model for the Telangana MT organization, demonstrating how technology-driven solutions and sustainable practices can transform operational efficiency.

New staff barracks and drivers' restrooms have been established at the Motor Transport Office to provide improved facilities for the personnel. These amenities are aimed at ensuring better convenience, comfort, and efficiency for the staff working round the clock in transport-related duties.

At present, a total of 734 staff members are working in the Motor Transport Office, which includes 308 Police Constables, 266 Home Guards, 80 Head Constables, 68 Special Police Officers, and 12 ARSIs. This strength highlights the significant workforce managing and supporting transport operations.
